

ExxonMobil Engineering Europe Ltd (EMEEL) vacancy for Civil/Marine Terminal Engineer

EMEEL is seeking an experienced Marine Terminal Engineer to join our organisation and provide specialist technical engineering assistance to our company marine terminal sites in meeting safety, environmental, operational, cost, and capital improvement objectives. The position is located in Fawley, near Southampton, but requires extensive international travel to cover global operations.

Primary Job Functions:

- Provide engineering expertise in the area of port engineering, which includes planning and defining layouts for marine terminal facilities including systems for berthing, mooring, cargo-handling, support structures, breakwaters and dredging.
- Provide capital project support, which includes design specification development and oversight of contractors' work throughout project execution.
- Participate in the development of company and industry standards.

Job Requirements:

- University degree in Civil/Structural Engineering
- Areas of technical expertise should include analyses and design of marine/port structures, concrete/steel structures, and foundation/ geotechnical engineering.
- Demonstrated work experience performing mooring and berthing analyses and designs to ensure safe vessel acceptance at marine berths.
- Proficiency in the use of computers for engineering analyses/design.
- Willing to travel internationally; to be flexible and adaptable to various working and living conditions.
- Demonstrated ability to handle multiple priorities and stakeholders.
- Proven ability to manage short deadlines, responding to emergency situations.
- Strong analytical and communication skills.
- Demonstrated work experience in high pressure/high visibility positions requiring professional demeanour and technical credibility.

To submit your CV, please e-mail it to uk.recruitment@exxonmobil.com and put the words **2010 Civil Marine** in the subject line.

More about us:

Within the worldwide ExxonMobil organisation, we in EMEEL provide specialist technical engineering consultancy and hands on support, onsite assistance and training for Esso & ExxonMobil operating plants across Europe and the Middle East. We also provide these services to the global organisation when business need demands.

Our specialists are highly competent individual contributors in their specific field of expertise who are able to provide both technical advice and practical support to our client organisations. This involves frequent business travel within Europe; to the client sites and for network meetings where site personnel in similar disciplines gather to share best practices, develop creative, innovative ideas and prepare implementation plans to improve the capacity and the longevity of our operating facilities. Our people are strong team players and they excel at leading using their in-depth technical expertise. Communication skills are critical as our specialists work with people at all levels of an organisation spanning cross-cultural workforce groups.

We have two offices in Europe - one is based at the Fawley Refinery near Southampton in Hampshire - the other is based at our Antwerp Refinery in Belgium.
