

# Mobil Grease™ XHP 222 provides significant savings on grease consumption and longer component life

Z.279 Ramblers

Energy lives here

## Switch and Improve

Due to the washing-off effect of corrosive seawater and heavy load applications on deck, the fishing vessel Ramblers consumed a high amount of conventional lithium EP 2 grease for regreasing to prevent wear and tear of parts. On the advice of Ingelbeen-Soete B.V. an authorised Mobil distributor the vessel switched to Mobil Grease™ XHP 222, which is a tacky lithium complex grease with a high resistance to water wash-off and high load carrying properties. It offers excellent protection against rust and corrosion. This change helped the customer to significantly reduce grease consumption, resulting in approximately 250% less grease consumed compared to the standard EP2 grease.

# 250%

## saved

on grease consumption  
and increased service life

# More than 4K Euros in annual savings\*

\* equivalent to the cost of the lubricants saved by switching to the new grease product (based on the cost of purchasing the existing lubricant versus the new cost of the slightly more expensive product)

Based on the experience of a single customer. Actual results may vary depending upon the type of equipment used, its condition, its maintenance, operating conditions and environment and any prior lubricant used.
