

ExxonMobil provides innovative wax solutions

Energy lives here™

For more than 50 years, ExxonMobil has worked to be the wax supplier of choice to its customers, providing consistent product quality while ensuring reliable supply for the products it offers.

As the largest North American producer of fully refined and slack petroleum waxes, ExxonMobil has a long history and extensive expertise in the wax business. ExxonMobil has a network of refineries with the capability to produce wax in North America. These refineries offer a broad range of products, including approximately 25 different fully refined, slack, and additized grades and a variety of logistics options including bulk liquid via ship, barge, railcar, and truck.

ExxonMobil is committed to meeting the requirements of its customers. To maintain this commitment, it routinely evaluates changing market needs to better meet customer requirements.

ExxonMobil's product line includes Parvan™ fully refined waxes, Waxrex™ semi-refined and specialty fully refined waxes, and Prowax™ slack waxes.

ExxonMobil waxes are used in a wide variety of applications, including candles, corrugating, board sizing, crayons, and adhesives. Its products help promote sustainability through the use of fewer materials and the re-use of existing materials, thereby enhancing conservation of resources. For instance, ExxonMobil's Prowax slack waxes are used as sizing agents in the manufacture of oriented strand boards, a viable alternative to plywood as a building material. Since long sheets of wood are not required, oriented strand boards enables the preservation of old-growth forests and supports socially responsible forestry practices. ExxonMobil's waxes also waterproof the wood, preventing water wicking and warping of the board and enabling longer life, thereby preserving resources.

ExxonMobil is a leader in technology and pursues initiatives to enable innovation in the petroleum wax market. This work is made possible by a strong focus on research and technical services and has led to technologies such as ExxonMobil's patented DILCHILL™

process, providing enhanced efficiency to conventional solvent dewaxing processes.

ExxonMobil capitalizes on an integrated team with unparalleled expertise in support of its wax business. ExxonMobil's market and product research and development efforts are championed by a team of experienced industry experts with leading-edge knowledge, supported by world-class analytical and testing laboratories.

Leveraging its robust processes around product development, manufacturing, testing, and a team experienced in change management, ExxonMobil reliably supplies customers with consistent quality products, enabling solutions that help the company remain at the forefront of its customers' needs.
